

HOW TO USE THIS TEMPLATE:

Introduction

The template reflects the steps set out in the PRINCE2® Method and is designed to prompt the Project Manager and help in the creation of the Risk Management Approach. There is also a Product Description for the Risk Management Approach at Appendix A of the PRINCE2 Manual.

Loading the file

This template has been produced using Microsoft Word. To use it, load up the file directly from the directory and starting from page 1 follow the prompts (in [...] brackets).

Deleting the [...] text

When the template is complete, the Risk Management Approach document can be printed and approved.

Prior to printing, you should delete all [...] prompt text.

Saving the Risk Management Approach document under its own name

Save the Risk Management Approach document by selecting the "SAVE-AS" command; this will avoid overwriting the standard template. You must specify your own Project Directory.

Once your Risk Management Approach is complete check the document against the following Quality Criteria:

- Responsibilities are clear and understood by both customer and supplier
- The risk management procedure is clearly documented and can be understood by all parties
- Scales, expected value and proximity definitions are clear and unambiguous
- The chosen scales are appropriate for the level of control required
- Risk reporting requirements are fully defined

PROJECT DOCUMENTATION

RISK MANAGEMENT APPROACH

8 Timing of risk management activities	
9 Roles and responsibilities	
10 Scales	
11 Proximity	
12 Risk categories	
13 Risk response categories	
14 Early-warning indicators	
15 Risk tolerance	
16 Risk budget	

3 Introduction

[States the purpose, objectives and scope, and identifies who is responsible for the approach]

4 Risk management process or procedure

[A description of (or reference to) the risk management process or procedure to be used. Any variance from corporate, programme management or customer standards should be highlighted, together with a justification for the variance. The process or procedure must describe how:

- Risks are identified and assessed
 - Risk responses are planned and implemented
 - Risk management activities are communicated.]
-

5 Tools and techniques

[Refers to any risk management systems or tools to be used, and any preference for techniques which may be used for each step in the risk management procedure]

6 Records

[Definition of the composition and format of the risk register and any other risk records to be used by the project]

7 Reporting

[Describes any risk management reports that are to be produced, including their purpose, timing and recipients]

8 Timing of risk management activities

[States when formal risk management activities are to be undertaken – for example, at the end of management stages]

9 Roles and responsibilities

[Defines the roles and responsibilities for risk management activities]

10 Scales

[Defines the scales for estimating probability and impact for the project to ensure that the scales for cost and time (for instance) are relevant to the cost and timeframe of the project. These may be shown in the form of probability impact grids giving the criteria for each level within the scale, e.g. for 'very high', 'high', 'medium', 'low' and 'very low']

11 Proximity

[Guidance on how proximity for risk events is to be assessed. Proximity reflects the fact that risks will occur at particular times and the severity of their impact will vary according to when they occur. Typical proximity categories will be: imminent, within the management stage, within the project, beyond the project]

12 Risk categories

[Definition of the risk categories to be used (if at all). These may be derived from a risk breakdown structure or prompt list. If no risks have been recorded against a category, this may suggest that the risk identification has not been as thorough as it should have been]

13 Risk response categories

[Definition of the risk response categories to be used, which themselves depend on whether a risk is a perceived threat or an opportunity]

14 Early-warning indicators

[Definition of any indicators to be used to track critical aspects of the project so that if certain predefined levels are reached, corrective action will be triggered. They will be selected for their relevance to the project objectives]

15 Risk tolerance

[Defining the threshold levels of risk exposure, which, when exceeded, require the risk to be escalated to the next level of management. (For example, a project-level risk tolerance could be set as any risk that, should it occur, would result in loss of trading. Such risks would need to be escalated to corporate, programme management or the customer.) The risk tolerance should define the risk expectations of corporate, programme management or customer and the Project Board]

16 Risk budget

[Describing whether a risk budget is to be established and, if so, how it will be used.]
